**(54) WASHING NET WITH
FLOAT**

(57) Abstract:

PROBLEM TO BE SOLVED: To
wash the wash (particularly
brassieres) well without damage.

SOLUTION: In a part of a bag 10
made of a net, a net is doubly placed
to form a vacant space S between the
nets, and a float 20 smaller than the
vacant space is movably enclosed in
the vacant space within the vacant
space. A framed shape-retaining
member 30 is enclosed in the vacant
space S along the inner edge of the
vacant space S. The buoyancy of the
float 20 is set to such a degree that
when a washing net holding the wash
is put into a washing machine, the net
is entrained in the flow of water in
the washing machine and sinks, and
that when the flow of water has
stopped or weakened, the top of the
net floats to the surface of the water.
